

Teacher Dashboard

Description

The purpose of our teacher dashboard is an efficient system, allowing data collection and analysis of children performing tasks and activities on the platform by tracking and measuring their educational success. Each section comprises synthesized student data in different computing formats so that they can improve children's reading comprehension. This section offers a snapshot of what each system does and how it helps teachers increase their students' literacy retention. The teacher dashboard has twelve data collection sections, providing teachers with a holistic mapping of their student's academic progress. Teachers play a significant role in our product creation throughout, and we would love to know your thoughts and suggestions. Insights from your feedback help us improve, so we highly appreciate and welcome all appropriate comments!
